About the Program

The goal of Information Systems doctoral studies is to cultivate scholars capable of independent research and teaching. This is achieved through a blend of coursework covering various information systems areas and collaborative research projects with faculty. Faculty research spans AI/machine learning, cybersecurity, social media, and health care IT. The program, lasting approximately four years, includes training in teaching methods, offering students the opportunity to teach undergraduate classes. Graduates have been successfully employed by esteemed research universities like the University of North Carolina – Greensboro, City University of New York - Baruch, DePaul University, Oakland University, Ohio University, among others. For more details about faculty research publications go to : https://go.uta.edu/isom-research
