

2013-2014 HONORS COLLOQUIA

# “Coral Reefs in the Face of Climate Change: What’s the Prognosis?”

Professor Laura Mydlarz  
Department of Biological Science

Coral reefs are centers of diversity. Almost everyone can picture a beautiful pristine reef teeming with coral, fish and crabs in their minds. Unfortunately, reefs have suffered huge losses from local impacts such as overfishing and pollution to global impacts from climate change. Dr. Mydlarz will discuss how corals are faring in the face of these stressors, what the main issues are and what coral reefs of the future may look like

## **col·lo·qui·um (kə-lō'kwē-əm)**

*n. pl. col·lo·qui·a (-kwē-ə)*

1. An informal meeting for the exchange of views.
2. An academic seminar on a broad field of study, usually led by a different lecturer at each meeting.

The Honors Colloquia are a new series of informal academic discussions of current events by faculty, staff, and students of the Honors College.
